BlueFletch EMS and Intune:
An Easy Win for Customers

Intune is a great out-of-the-box EMM for Microsoft 365 enterprise users, but it has several functional gaps for managing and securing shared employee Android devices.

The BlueFletch EMS toolset augments Intune for increased Android security and flexible device and app management controls.

Microsoft Intune

Key Value-Adds

BlueFletch EMS is an all-in-one suite of software tools designed to provide advanced enterprise-grade security for employee Android devices.

BlueFletch EMS can help fill the gaps where Intune falls short in four key areas:

- File Administration

- Device Security & Lockdown

- Device Remote Control

- Advanced Device Control (e.g. StageNow)

File Administration

Intune customers are unable to download, install, and configure apps that aren't hosted by Google. Also, in order to perform OS updates and lifeguard patches, Intune requires end-user interaction.

BlueFletch Playbook can be used to acheive more customizations with file manipulations and app installations. With Playbook, you can install APKs, config files, and certificates directly to a device, without having to go through the Google Play Store.

FILE ADMINISTRATION	Intune	BlueFletch ENTERPRISE MOBILE SECURITY
Requires use of Google Play	✓	
Install non-Google hosted apps		✓
Automate OS updates/patches		✓
Push APKs and config files to devices directly		✓

DEVICE SECURITY	Intune	BlueFletch ENTERPRISE MOBILE SECURITY
Kiosk lockdown of device	✓	✓
SSO for all applications		✓
Role-based access to apps		✓
Restrict access to settings	✓	✓
Open zone / offline mode		✓
Smart logout (cradle)		✓
Secure, internal notifications		✓
NFC, biometric, voice, PIN, barcode re-auth		✓
Clear app data on session logout		✓

Device Security & Lockdown

Microsoft Intune offers minimal security customizations for customers using rugged Android devices in a shared device model.

BlueFletch Launcher can be used to fill the gaps in security while improving the login experience for end-users.

BlueFletch Launcher is a customizable home screen replacement for shared Android devices that provides single sign-on to all mobile, web, and third party apps, role-based permissions app access, and enterprise-grade security features to lockdown devices and settings.

Device Remote Control

To leverage Remote Control with Intune, customers must use and purchase licenses from their third-party tool such as TeamViewer.

Device Remote Control is a tool included with BlueFletch EMS, and there is no need for a seperate license. With this feature, admins can remotely control devices in the field by clicking and performing actions to debug from the EMS web portal.
