

# Secure every login. See every device. Control every session.

Your workers get their own secure session with one-tap authentication, automatic SSO, and full audit trails across every shared device.

BlueFletch Enterprise delivers value at every level of your organization: faster workflows for frontline workers, simplified device management for IT teams, and measurable ROI for business leaders.

## Key Benefits

- Recover Lost Worker Productivity**  
 One authentication event grants automatic access to every app, web application, and legacy system in their workflow. The device is ready to work the moment they are.
- Security and Compliance at Every Login**  
 Each worker starts a clean, isolated session with no personal or operational data carried over from the previous user, supporting GDPR compliance (Art. 5, Art. 17, Art. 25).
- Gain Full Visibility Into Your Device Fleet**  
 Real-time dashboards show device health, battery status, network performance, app usage, crash reports, and login patterns across your entire fleet. GPS tracking and location history pinpoint every device.
- Cut IT Support Costs**  
 Remote control lets your IT team view and operate any device from the portal for direct troubleshooting without requiring a site visit or access to backend systems. Automated provisioning and deprovisioning through your IdP eliminates manual account setup.
- Protect Data and Maintain Compliance**  
 Full per-user audit trails record who used which device, when, and what actions each user took. IT-configurable session clearing policies enforce session separation between users, supporting GDPR compliance with data integrity (Art. 5), right to erasure (Art. 17), and data protection by design (Art. 25).

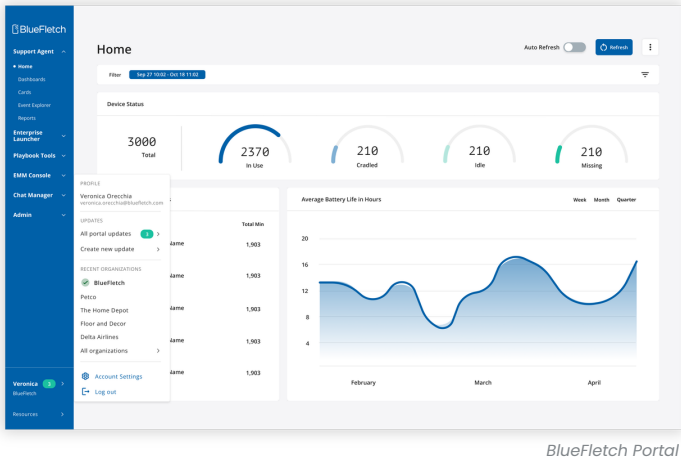

## How it works

- Pick up any shared device**  
 Badge tap, barcode scan, PIN, or facial biometrics. Authentication completes in under 5 seconds.
- Automatic single sign-on to all apps**  
 Role-based apps and tokens load automatically. No secondary logins required.
- Logout clears the session**  
 Credentials, tokens, cache, browsing history, and media content clear automatically. Clean slate for the next shift.

**\$107K+**

## Annual labor cost savings from login time reduction alone.

Major US specialty retailer + BlueFletch customer  
 5,000+ shared devices, 280+ locations. Over 640 hours recovered per month across the fleet.  
 Based on anonymized customer deployment data

Integrations

Identity Providers

Active Directory

okta

Ping Identity

Microsoft Entra ID

+ Any SAML / OAuth / OIDC

MDM / EMM Compatibility

SOTI MOBICONTROL

Workspace ONE\*

Microsoft Intune

+ Any Enterprise Android MDM

Core Capabilities

- Authentication & Single Sign-On**  
Your workers authenticate in under 5 seconds with badge tap, PIN, barcode, Face ID, fingerprint, or FIDO key. One login unlocks every app, web resource, and legacy system. No passwords. No per-app logins.
- Role-Based Device Experience**  
Each worker sees a personalized home screen based on their role. Apps, layouts, and features adjust automatically at login. Workers interact only with the tools their job requires.
- Device Security & Loss Prevention**  
A secure launcher replaces the default home screen, blocking unauthorized access. GPS tracking, geofencing, cradle enforcement, motion-activated lock, and low battery alerts keep every device accounted for.
- Fleet Analytics & Dashboard**  
Real-time dashboards track device health, app usage, login patterns, and location across your fleet. Identify underutilized devices, flag unused apps, and surface training gaps before they become tickets.
- Remote Support & Management**  
Your IT team remotely views and controls any device screen from the portal, no site visits required. Remote lock, wipe, reboot, file distribution, and scripted actions all run from a single console.

Security + Compliance

- ✓ SOC 2 Type II: Annual third-party audit
- ✓ CMMC Level 1 (Level 2 in progress)
- ✓ Enables GDPR compliance: Articles 5, 17, 25
- ✓ Per-User Audit Trails: Full session logging
- ✓ On-Prem Authentication available

Platform Support

| PLATFORM | COVERAGE                                                                            |
|----------|-------------------------------------------------------------------------------------|
| Android  | Any OEM: Zebra, Honeywell, Datalogic, Samsung, Lenovo, others. No hardware lock-in. |
| Windows  | Shared workstations, kiosks, POS terminals via Enterprise Launcher for Desktop.     |
| ios      | Apple devices via Symmetrium VMI (virtual Android workspace on Apple hardware)      |
